

## CASE DESCRIPTION

### Unusual lesion of tongue

Suhail Amin Patigaroo<sup>1</sup>, Tabish Maqbool<sup>1</sup>, Summaiya Farooq<sup>2</sup>

#### Abstract

A case of a 20 years-old female with complaints of swelling over the tip of the tongue with no history of bleeding or pain for the last 2 years. The tumorous mass measured 3 cm × 4 cm and upon excision was reported to be a cystic schwannoma. The post-op course was uneventful.

#### Streszczenie

Przypadek 20-letniej kobiety z objawami obrzęku nad koniuszkiem języka, bez historii krwawień i bólu w ciągu ostatnich 2 lat. Guzowata zmiana miała 3 cm × 4 cm i po usunięciu potwierdzone, iż jest to że jest nerwiak osłonkowy. Przebieg pooperacyjny był niepowikłany.
